

SEXY RODENT

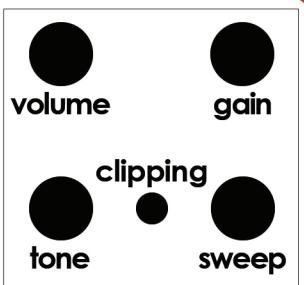

Controls Layout

volume : This knob adjusts the output volume of the effect.

gain : This knob adjusts the amount of distortion. The range of this control is pretty wide, it covers ground from mild overdrive to straight-up fuzz. This is also dependant on the selected clipping option.

sweep : This knob adjusts the frequency response of the opamp gain stage. Turning this knob clockwise will allow more low-end to be clipped. Fully counter-clockwise is the stock Rat value.

tone : This knob adjusts the cut-off frequency. Turning this knob clockwise will filter more higher frequencies out.

Internal controls

mellow : Setting this on will tame the beast a little. It will filter some higher frequencies out at the clipping stage resulting in a slightly less aggressive, smoother sound. The default value is off, switch to the right position.

Specifications

Power supply : 9V DC center negative only.
Current draw : 40mA at full led brightness.

tone : This knob adjusts the cut-off frequency. Turning this knob clockwise will filter more higher frequencies out.

clipping : This switch selects the clipping mode between LEDs, silicon and germanium diodes. Each will have their own threshold and will give a different character to the distortion.

Internal controls

mellow : Setting this on will tame the beast a little. It will filter some higher frequencies out at the clipping stage resulting in a slightly less aggressive, smoother sound. The default value is off, switch to the right position.
